Project Management Analysis

Using the functions and capabilities of Python and the data analyis libraries, we tackle the analysis of the Project Management dataset. We will explore the key attributes: Project Name, Project Description, Project Type, Project Manager, Region, Department, Project Cost, Project Benefit, Complexity, Status, Completion, Phase, Year, Month, Start Date & End Date to gain insight on what influences the projects' progress and state. Visualizing the findings using data visualization techniques and conducting analysis to identify: trends, patterns and correlations within the dataset to provide a satisfactory report.

Import Library

+ Code + Markdown

```
import pandas as pd
import seaborn as sns
import matplotlib.pyplot as plt
```

Python

Import CSV File

```
df = pd.read_csv("12_Project Management Analysis.csv")
```

Python

Data Preprocessing

.head()

Using .head() to display the first 5 rows of our dataset.

```
df.head()
```

Python

	Project Name	Project Description	Project Type	Project Manager	Region	Department	Project Cost	Project Benefit	Complexity	Status	Completion%	Phase	Year	Month	Start Date	End Date

.tail()

Using .tail() to show the last 5 rows of the dataset.

Using .tail() to show the last 5 rows of the dataset.

```
df.tail()
```

Python

.shape

With .shape, we can get the total rows and columns of the dataset.

```
df.shape
```

Python

```
(99, 16)
```

.columns

.columns allow us to identify all columns present in the dataset.

```
df.columns
```

Python

```
Index(['Project Name', 'Project Description', 'Project Type',
       'Project Manager', 'Region', 'Department', ' Project Cost ',
       ' Project Benefit ', 'Complexity', 'Status', 'Completion%', 'Phase',
       'Year', 'Month', 'Start Date', 'End Date'],
      dtype='object')
```

.dtypes

With .dtypes, we can identify the data types assigned to each column

```
df.dtypes
```

Python

```
Project Name           object
Project Description    object
Project Type           object
Project Manager        object
Region                 object
Department             object
 Project Cost           int64
 Project Benefit        int64
Complexity             object
```

.unique()

.unique() shows the unique values in a specified column.

```
df['Project Type'].unique()
```

Python

```
array(['INCOME GENERATION', 'PROCESS IMPROVEMENT',
       'WORKING CAPITAL IMPROVEMENT', 'COST REDUCTION'], dtype=object)
```

.nunique()

.nunique() on the other hand provides us the number of unique values in each columns.

```
df.nunique()
```

Python

```
Project Name           99
Project Description    95
Project Type            4
Project Manager         7
Region                  4
Department              5
 Project Cost          99
 Project Benefit       99
Complexity              3
Status                  4
Completion%            22
Phase                   5
Year                    5
Month                  12
Start Date             49
End Date               43
dtype: int64
```

.describe()

Shows the count, mean, median, etc. of columns with Int64 datatypes.

```
df.describe()
```

Python

	Project Cost	Project Benefit	Year	Month
count	9.900000e+01	9.900000e+01	99.000000	99.000000
mean	4.156649e+06	8.828178e+06	2022.747475	7.151515
std	1.076544e+06	2.164019e+05	1.402210	3.211471
min	2.418301e+06	8.422578e+06	2021.000000	1.000000
25%	3.251948e+06	8.656248e+06	2022.000000	4.500000
50%	4.172827e+06	8.846243e+06	2022.000000	7.000000
75%	5.063288e+06	9.019234e+06	2024.000000	10.000000
max	5.974815e+06	9.165877e+06	2025.000000	12.000000

.value_counts()

Returns the number of all unique values in a column.

```
df['Project Type'].value_counts()
```

Python

```
Project Type
INCOME GENERATION              27
PROCESS IMPROVEMENT            25
WORKING CAPITAL IMPROVEMENT    25
COST REDUCTION                 22
Name: count, dtype: int64
```

.isnull()

Checks for null values.

```
df.isnull()
```

Python

	Project Name	Project Description	Project Type	Project Manager	Region	Department	Project Cost	Project Benefit	Complexity	Status	Completion%	Phase	Year	Month	Start Date	End Date
